

***For The Ultimate  
Transmission Protection –***

***Select EP NTZ's TRANSPROTECTOR™  
Magnetic Micro Filter***

EP NTZ Micro Filtration's TRANSPROTECTOR™ Series of inline magnetic micro filters for transmission and power steering systems offer many advantages over other filters on the market today:

**Better performance** – cleaner fluid results in better performance of the entire system, slower wear of components and extended product life.

**Improved filter construction** – The TRANSPROTECTOR features a durable, stainless steel exterior construction, along with a rugged metal core, for long life. And our patented MicroClean™ filter element's depth-type construction removes more of the smallest particles than any other element on the market today.

**Easy to install and safe to operate** – our unique reverse flow feature allows for flow in either direction, eliminating installation errors and preventing damage to components.

## All The Protection You Need – EP NTZ’s TRANSPROTECTOR

Today’s transmission systems provide the latest in power and convenience. But these systems – including continuously variable transmissions (CVTs) and dual clutch transmissions – add a great deal of contamination to transmission fluid. Cleanliness of transmission or power steering fluids is beneficial to the entire system:

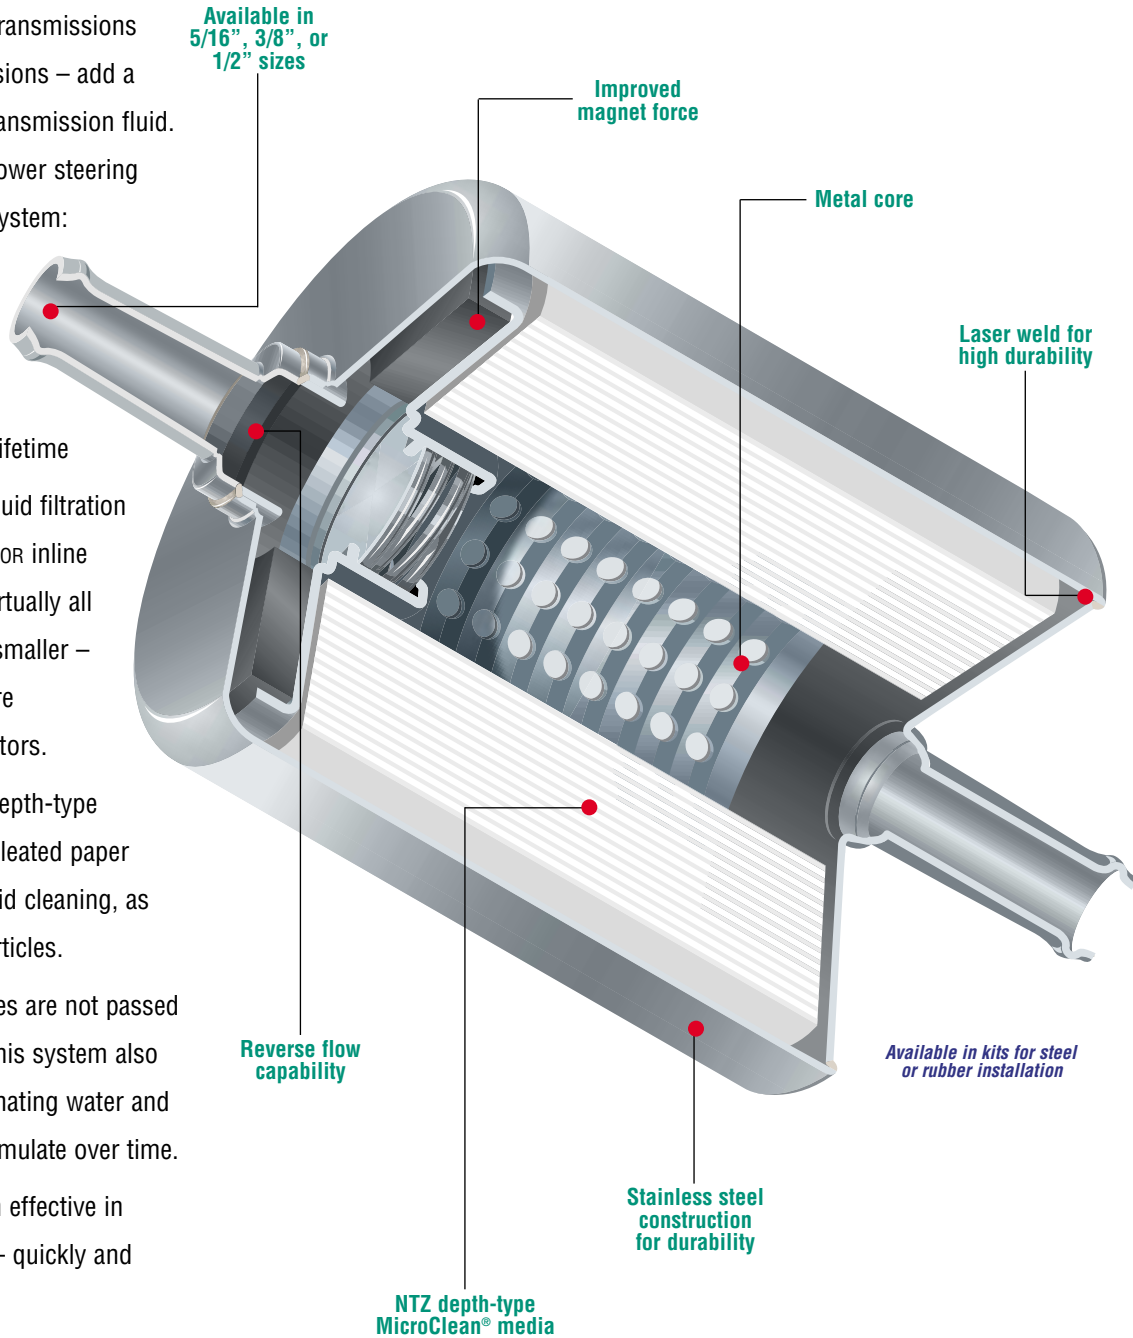

- Decrease in component wear
- Improvement in performance
- Reduced temperature of fluid
- Extended overall component lifetime

EP NTZ has taken transmission fluid filtration to a new level. Our TRANSPROTECTOR inline magnetic micro filter removes virtually all the particles of 15 microns and smaller – at a “clean up speed” that is more effective and faster than competitors.

In addition, our radially wound depth-type filter element is superior to the pleated paper filters of competitive filters in fluid cleaning, as well as in its capacity to hold particles.

This element ensures that particles are not passed through with fluid or released. This system also preserves fluid integrity by eliminating water and chemical contaminants that accumulate over time.

The result? A filter that is proven effective in removing the smallest particles – quickly and completely.

# PROTECTOR™

## Get Everything You Need In The TRANS<sub>PROTECTOR</sub> Kit

The TransProtector Kit takes you through the entire filter installation process – in three sizes for rubber or steel lines – for all your installation needs:

- Initial installation: Detailed instructions, along with the materials you'll need, for first installation of the filter into the cooler line.
- Regular service: Instructions for replacement of the filter as well as ongoing inspections of the lines.

The TransProtector Kit includes:

- TransProtector **Filter**, featuring the radially wound depth-type MicroClean filter element
- Detailed **Instructions**, complete with photos, to take you step-by-step through installation and maintenance
- Pan **Sticker** to remind consumers and service personnel of regular service maintenance periods
- In some kits, **Clamps and/or Fittings** are provided to match the tubing size you require
- All packed in a convenient measuring/storage **Bucket**

# The **TRANS**PROTECTOR™ — Your Best Protection

## Filtration Effectiveness Comparison \*

	Competitor A	Competitor B	TRANSPROTECTOR
>2 micron	3%	2%	11%
>5 micron	12%	6%	29%
>15 micron	46%	33%	82%
>25 micron	76%	68%	95%

\* Please note: Research was undertaken by EP NTZ of a controlled sampling of vehicles, along with bench testing, in 2004. For more information about this research, please contact [marketing@epntz-filter.com](mailto:marketing@epntz-filter.com).
